A bit more information about my technical skills:)

JAVASCRIPT01

Proficient in JavaScript with a solid understanding of core concepts such as asynchronous programming (Promises, async/await), closures, event handling, and DOM manipulation. Experienced with ES6+ features including arrow functions, destructuring, modules, and classes. Comfortable working with APIs, debugging, and applying JavaScript in frontend environments, particularly with React for building user interfaces and managing state efficiently

REACT02

Well-versed in React, with a solid grasp of essential concepts like component lifecycle, hooks (useState, useEffect, useForm, useRef), and the context API for state management. Experienced in building reusable components, working with forms, and implementing basic performance optimizations. Comfortable with modern React features, including functional components and React Router for navigation. Skilled in API integration, debugging, and managing state using Redux.

NEXT.JS03

I have a strong foundational understanding of Next.js, including building server-side rendered and static web applications for improved performance and SEO. I am experienced in using dynamic routing, API routes, and file-based architecture to create scalable applications. Additionally, I have hands-on experience with Next.js features like image optimization, middleware, and deploying projects efficiently using platforms like Vercel. My skills also include leveraging global CSS modules and Tailwind CSS for styling, ensuring responsive and high-performance web solutions.

WEBFLOW04

Designed and developed visually engaging, responsive websites using Webflow, with a strong focus on CMS structuring, dynamic content filtering, and custom interactions. Implemented advanced layout techniques including asymmetrical grids, scroll-based animations, and extended CMS functionality via third-party integrations. Utilized Finsweet Attributes for dynamic CMS sliders and gallery filtering. Demonstrated strong problem-solving, UX awareness, and visual storytelling through client collaboration and independent project execution.
